

Daniel Montero Cervantes

Principal Application Software Engineer

ing.danielmontero@gmail.com | 3314-481940

Education

Universidad de Guadalajara

Bachelor's degree in Computer Engineering

Sep 2007 – Jan 2012

Work Experience

Oracle

Principal Application Software Engineer

Oct 2021 – Present

Working on Oracle Communications Cloud Native Core as part of the Service Communication Proxy (SCP) team. Contributing to the design, development, testing, and maintenance of cloud-native microservices for 5G networks.

Technologies: Java, Micronaut, Spring Boot, Gradle, Kubernetes, Helm, GitLab CI/CD, REST APIs, and HTTP/2.

Digital On Us

Senior Software Engineer

May 2019 – Oct 2021

Contributed to the design and development of several services using agile methodologies and test-driven development practices. Worked across the full stack, with a stronger focus on backend development.

Technologies: Java, Spring Boot, Spring Core, Spring MVC, Spring Data, Spring WebFlux, Cassandra, MongoDB, Docker, and React.

Oracle

Senior Software Engineer

Nov 2016 – Apr 2019

Worked on an internal ERP application within Oracle Applications Labs, contributing to design, development, testing, support, and maintenance.

Technologies: Java, Spring Boot, Hibernate, JUnit, and Oracle PL/SQL.

Tata Consultancy Services

Software Engineer

Jun 2015 – Nov 2016

Worked with C++, Java, WebSphere, and MQ, primarily on a project to migrate C++ components to J2EE web services.

Gameloft

Software Engineer

Apr 2012 – Jan 2015

Developed Android games using the NDK, mainly in C++, along with Java, Python, and ActionScript 3. Focused on resolving performance issues affecting specific devices and graphics processors. Worked with libraries and tools including Irrlicht, Box2D, GameSWF, and the Android SDK.

Skills

Programming languages: Java, C++, Kotlin, Python, and JavaScript.

Frameworks and libraries: Micronaut, Spring Boot, Spring Core, Spring MVC, Spring Data, Spring WebFlux, React, and JUnit.

Build, CI/CD, and version control: Gradle, GitHub Actions, GitLab CI/CD, Git, and SVN.

Databases: Oracle, PostgreSQL, MySQL, Cassandra, and MongoDB.

Cloud and containers: Kubernetes, Helm, Docker, and Azure.

AI tools: Codex and ChatGPT, including MCP integration development, reusable skills, and prompt engineering.
